H30 MINING GRADE LEDS

ULTRA DURABLE WORK LIGHTS

Brighter, More Durable
Four Sizes for 2025

H30 Mining-Grade Work Lights deliver best-in-class light output, unmatched durability.

They are **25% brighter** yet have a **25% lower-profile** than standard lights. A robotically sealed lens maximizes durability while reducing the number of parts and assembly time. The result is an **impressively bright & robust** light at a surprisingly aggressive price point.

VIBRATION 21.2 GRMS* RATING

** Higher vibration rating than all Nordic LEDs—even when adding their Quake Dampening System that can bring their vibration rating up to 20 Grms.*

PLUG N' PLAY INSTALLATION

All H30 work lights come standard with patented dry seal construction and Deutch DT2-Pin connector. Plus, because these LEDs are newly engineered, they pack a powerful punch with a small footprint. Mounting brackets are single-bolt with a base size between 1.7"–2.8". Perfectly sized to fit all equipment.
